Editorial note 2023

Editorship is a job of great rectitude with responsibility. Hereby I am addressing the researchers of this journal directly through this platform. Being as Editor in chief of Indian Journal of Microbiology Research, I am very grateful for constant stimulus which I have received from members, reviewers, authors and technical assistants of Innovative Publication. The IJMR; guided by an experienced editorial team, is successful in regularly publishing research works covering the all major areas of medical microbiology. With great pleasure I can announce that since year 2014, we have published 48-50 article on average per year with in house calculated impact factor of 1.7 and hoping to maintain this regularity and expansion of indexing database in future also.

In the last couple of decades, Microbiology has emerged as major branch in delivery of healthcare services. Specially after covid pandemic importance of molecular diagnostics has been progressed a lot. Diagnostic microbiology has changed from manual to automation to a greater extent. In this era of automation, which should not forget to give importance to our microscopy skills which is critically important in clinical correlation of diagnosis of an infectious disease. The purpose of this editorial note to encourage the all researchers in writing well organized research articles and exploring the innovative ideas. Also I want to motivate reviewers for comprehensive evaluation of manuscripts in terms of novelty and evidenced based analysis; which will ultimately provide our readers updated and modernized information on important topics.

So lastly I do not want to miss the opportunity to thank our authors, peer reviewers, readers and the office bearers who provide constant support all the time.

Regards

Editor-in-chief

Dr. Purav G. Patel

Professor and Head

Department of Microbiology

The Gujarat Cancer Research Institute Civil Hospital, Ahmedabad, Gujarat, India
